

SUBSTITUTE ABSTRACT

A bearing fixed assembly in a direct current fan includes a fan base, a motor unit, and a fan blade unit.

5 The motor unit fits with the fan base and the fan blade unit is attached to the fan base and the motor unit with a spindle to constitute an integral structure. The fan base at the top thereof has an annular recess to form an inner ring and an outer ring and at the lower central area thereof
10 has a closed chamber filled with lubrication oil. A stop ring is disposed in the annular recess to support the outer ring such that the motor unit can be sustained from deviation.
